

Department of Biology Scholarship

Landon Fehlberg

Biological Science Composite Teaching, Senior

A few things about me:

I proudly come from Huntington, Utah. Growing up in Castle Country gave me the opportunity to experience camping, fishing, bug collecting, hiking, and everything nature had to offer from the Manti-La Sal Forest to the San Rafael Swell. Growing up in this very unique area greatly enhanced my love for the natural world around me and propelled me into learning biology. I am studying biology and how to teach it in a secondary education setting. I am part of the Future Science Educators and the Global Aggie Program. I have taught several times at Science Unwrapped nights at Utah State University. I have been a judge for multiple high school, middle school, and elementary science fairs, including being a head and specialty judge for the 2015 Bridgerland Science Fair. I have the goal of becoming a high school biology teacher in a rural area in Central Eastern Utah preferably in the Castle Country. This scholarship allows me to graduate Spring 2016 and begin my dream career Fall 2016, changing the lives of students. My goal is to help educate students to understand that biology is applicable to everything we see and experience in our lives.
