

Christenson Memorial Scholarship

Hannah Wagner

Biology, Senior

A few things about me:

I am studying biology with a cellular/molecular emphasis and a minor in chemistry. I am passionate about all things related to molecular biology. I have been involved in Dr. Frank Messina's lab studying the evolution of beetles and done research with Dr. Anne Anderson studying the effects of nanoparticles on plant tissues. I presented a poster on my research with border cells and their release at the Biology Undergraduate Research Symposium. This summer I will be doing research at the University of Utah. I am the president of the Utah State Women's Rugby Club and spend most of my weekends competing with the team. After I complete my undergraduate degree I intend to earn a PhD and eventually be the head of my own lab.
