

David B. Drown Scholarship for Public Health

Isabella Maria Muffoletto

Public Health, Industrial Hygiene, Sophomore

A few things about me:

I am an industrial hygiene major and completing my second year at USU. I'm very excited to pursue an industrial hygiene internship this summer at Hill Air Force Base with the Bioenvironmental Engineering Flight of Aircraft Support Operations. It's an ideal opportunity for me as I plan to pursue an industrial hygiene career in the U.S. Air Force.

Though it's just my second year at USU, I feel as though I've been a part of this campus for a long time. I began attending, and volunteering for, Science Unwrapped events my first year at Logan High School. During high school, I participated in USU's Biotechnology Summer Academy two years in the row and attended Engineering State prior to my senior year. I also attended Discover Biology Engineering, where I was invited during the fall of my junior year to volunteer in the synthetic spider silk lab of USTAR Biology Professor Randy Lewis. It was an amazing opportunity. Dr. Lewis later hired me as an undergraduate researcher and I worked in the lab until this past fall, when I entered USU's Air Force ROTC Detachment.

I'm proud to be a Utah State University Aggie and an Aggie Scientist. Thank you, USU Department of Biology, for helping to make my dreams come true.
