

Ivan G. Palmblad Scholarship

Sarah James

Biology, Junior

A few things about me:

I'm currently studying Biology, Chemistry and Spanish. I am a new student in the College of Science and am looking forward to all the research opportunities the college provides. The biology field has always interest me and sparked my interest. My first experience goes all the way back to middle school. I fell in love and knew I wanted to be a biologist. This scholarship really means a lot to me because I can continue learning and looking for opportunities to broaden my knowledge. I hope to be able to work with my professors as well. I am excited for my next years here at Utah State and for all the awesome opportunities offered to Utah State students. After I graduate, I hope to be able to continue learning and growing. I love studying here at Utah State and love being an Aggie.
